

Instruction Manual

Remote control to reprogram sensing range

673-100R

Product Description

This remote is used to reprogram the sensing range of compatible sensor taps. Each model has a different minimum and maximum range, please refer to the latest manual for each model.

Compatible Models

CAT 673031 / 67910 / 6791032 / 67305 / 67911 / 67913 / 67917 / 679178

Specifications

2 x AAA Batteries (batteries not included)

13 x 4 x 2cm, 30g

Instructions for Use

Point the remote LED directly at the sensor on the sensor tap within close range. The indicator light on the sensor will flash on each press of the remote button.

Click or hold down the Short (-) button to decrease the sensing range or Long (+) to increase the sensing range.

The sensor on the tap will flash twice if you have reached the minimum or maximum range.

If the sensor light does not flash, confirm there is power to both the sensor and the remote. Once power is confirmed, try again, changing the distance and angle of the remote.

Important Note: The sensor will override the original sensor tap range and record the range programmed with this remote. It will no longer automatically calibrate sensing range, even after power failures or hard reset. Do not use any other remote on the sensor tap as this may cause sensor failure. Contact us for a replacement remote.
